

The Music Player

13006107 INTRODUCTION TO COMPUTERS AND
PROGRAMMING

Software Engineering Program

Faculty of Engineering, KMITL

By

Name: Chiho Li

ID: 64011378

Introduction:

This program is going to be used for playing songs or podcasts and we can add in songs by importing files into the program. We can listen to our favourite songs or podcast at any given time that we use the computer even without internet connection.

Motivation:

I wanted to create this program because I think it would be cool if you can create a music player from scratch and be able to import your own songs, by being able to import your own songs it can bypass Copyright problems which is very troublesome for listen cover songs or remixes.
